

Bijan Pourriahi

Senior Software Engineer | Developer Platforms

Rust · Python · APIs · Developer Tooling · Production Systems

beejmaxx@gmail.com | 303-900-3155 | beejmaxx.github.io | github.com/beejmaxx

PROFILE

Senior software engineer with 10+ years of experience building developer-facing platforms, API integrations, and data-intensive systems. Owns systems end-to-end across architecture, implementation, deployment, observability, and operations, with recent work in Rust/Python runtimes, WebSockets, workflow automation, and AI-assisted development tools.

CORE STRENGTHS

Developer platforms and internal tools; API, WebSocket, authentication, and third-party integrations; replayable workflows, simulation, and evaluation systems; MCP/CLI tooling; Docker, Kubernetes, AWS/Linux operations, monitoring, and production debugging.

PROFESSIONAL EXPERIENCE

Playa Labs LLC - Senior Software Engineer

Jun 2021 - Aug 2026 | Remote

- Owned architecture, implementation, deployment, and operation of a proprietary Rust/Python platform for reproducible, debuggable, and observable research and execution workflows.
- Designed shared runtime components spanning replay, simulation, account-state models, risk controls, broker integrations, and evidence capture across historical and live workflows.
- Built API, WebSocket, authentication, and adapter layers for brokers, prop firms, market-data providers, execution APIs, dashboards, and operational tooling.
- Created MCP/CLI tools, scheduled experiments, large-scale evaluations, monitoring, alerting, health checks, and production runbooks across AWS/Linux environments.

Rare Isle Fund - Principal Software Engineer

Apr 2019 - Jun 2021 | Remote

- Built the fund's automation, analytics, research, data pipelines, dashboards, and production operations infrastructure from scratch.
- Designed Python/Pandas/SQL pipelines for market-data ingestion, high-volume parameter sweeps, historical simulation, result storage, strategy ranking, and statistical review.
- Built operational controls and monitoring systems; owned production delivery across Python, Go, SQL, AWS, Grafana, and Linux.

FocusVision - Senior Software Engineer

Nov 2015 - Jun 2017 | Portland, OR

- Led integration of five acquired Rails/PostgreSQL SaaS systems, including APIs, data migrations, infrastructure changes, and production releases.
- Led and mentored engineers while owning delivery, debugging, documentation, production support, and cross-team coordination.

EARLIER EXPERIENCE

24tru - Software Engineer, 2013-2015: Co-owned a market-research SaaS platform, managed deployments and production maintenance, built APIs and video workflows, and improved Solr indexing performance by roughly 100x with a custom Java indexer.

gloo - Software Developer, 2012: Delivered Ruby on Rails features, tests, bug fixes, and PostgreSQL-backed client products.

TECHNICAL STACK

Languages: Rust, Python, SQL, Ruby, Go, TypeScript, Java

Systems: APIs, WebSockets, REST integrations, CLIs, MCP, internal tools, workflow automation

Platform: Docker, Kubernetes, AWS, Linux, Git, CI/CD, Grafana, Prometheus, Airflow, Dagster, Argo Workflows

Data: PostgreSQL, ClickHouse, SQLite, Pandas, event logs, replay systems, experiment tracking
