PROFILE

Senior software engineer with 10+ years building backend platforms, API integrations, and production systems. Recent work spans Rust execution engines shared by simulation and live trading, distributed research workflows, broker integrations, and production infrastructure.

PROFESSIONAL EXPERIENCE

Playa Labs LLC - Senior Software Engineer

Jun 2021 - Aug 2026 | Remote

- Built and operated a Rust/Python research and execution platform supporting \$2M+ in trading capital.
- Built distributed research workflows with database-backed job queues, worker heartbeats, lease recovery, and ClickHouse-backed experiment storage.
- Unified simulation and live trading on the same Rust execution engine, preserving identical strategy, account-state, and risk-control logic across backtesting and production.
- Integrated broker and market-data APIs, implementing account/order reconciliation, connection retries, protective-order handling, and persistent execution journals.
- Owned deployment and production operations, including monitoring, alerting, troubleshooting, and internal CLI/MCP tooling.

Rare Isle Fund - Principal Software Engineer

Apr 2019 - Jun 2021 | Remote

- Built automated crypto trading infrastructure from scratch, running dozens of strategies live across dozens of cryptocurrencies.
- Designed Python/Pandas/SQL pipelines for market-data ingestion, parameter sweeps, historical simulation, and strategy ranking.
- Owned production delivery, operational controls, and monitoring across Python, Go, SQL, AWS, Grafana, and Linux.

FocusVision - Senior Software Engineer

Nov 2015 - Jun 2017 | Portland, OR

- Led integration of five acquired Rails/PostgreSQL SaaS systems, spanning APIs, data migrations, infrastructure changes, and production releases.
- Led and mentored engineers; coordinated cross-team delivery, troubleshooting, and production support.

EARLIER EXPERIENCE

24tru - Software Engineer, 2013-2015: Improved Solr indexing performance by roughly 100x with a custom Java indexer. Co-owned a market-research SaaS platform, including APIs, video workflows, deployments, and production maintenance.

gloo - Software Developer, 2012: Delivered Ruby on Rails features, tests, bug fixes, and PostgreSQL-backed client products.

INDEPENDENT PROJECTS

Workflow automation: Built and operated Kubernetes-based job-processing infrastructure for a social media management company, owning deployments and workload operations.

orbrunner.com: Built a Rails/Kubernetes platform running isolated Rust trading runtimes, with strategy controls, account-level risk management, persistent event journals, and per-account credential isolation.

TECHNICAL SKILLS

Languages: Rust, Python, Ruby, SQL

Backend / Systems: Ruby on Rails, distributed systems, workflow orchestration, REST APIs, WebSockets

Data: PostgreSQL, Redis, ClickHouse

Infrastructure: Docker, Kubernetes, AWS, Linux, Grafana, Prometheus
