

BIJAN POURRIAH

PLATFORM ENGINEER WHO MAKES COMPLEX SYSTEMS OPERABLE

Rust / Python runtimes • APIs & WebSockets • Developer tooling • AI-assisted engineering
bijan.pourriahi@gmail.com | 303-900-3155 | beejmaxx.github.io | github.com/beejmaxx

I build the connective tissue behind complex software systems: runtime platforms, failure-aware integrations, replayable workflows, and tools that let engineers understand, debug, and operate the whole system. 10+ years owning delivery from architecture through production.

10+ YEARS end-to-end platform ownership	RUST/PYTHON runtime and tooling systems	5 SYSTEMS integrated after acquisitions	~100x faster search indexing
--	--	--	---------------------------------

SELECTED IMPACT

BUILD THE CORE

Shared Rust/Python semantics connected simulation, live evaluation, account state, risk controls, and evidence capture.

INTEGRATE THE EDGES

API, WebSocket, auth, and adapter layers connected brokers, market data, execution services, and uneven failure models.

ENABLE THE TEAM

MCP/CLI interfaces, AI-assisted workflows, observability, and runbooks made complex systems easier to use and debug.

EXPERIENCE

Confidential Financial Systems Client | Senior Software Engineer / Technical Lead

2021-Present | Remote | Platform & Runtime Systems

Owned the platform. Architected, built, deployed, and operated a proprietary Rust/Python system for reproducible research and execution workflows.

Unified research and production. Shared replay, simulation, account-state, risk, broker-integration, and evidence-capture semantics across historical and live workflows.

Built for real operations. Delivered APIs, WebSockets, MCP/CLI tools, AI-assisted workflows, scheduled evaluations, dashboards, monitoring, alerting, health checks, and runbooks across AWS/Linux.

Rare Isle Fund | Principal Software Engineer

Apr 2019-Jun 2021 | Remote

Built the engineering function from scratch. Created automation, analytics, data pipelines, dashboards, and production operations that replaced manual workflows.

Made research repeatable. Designed Python/Pandas/SQL pipelines for market-data ingestion, parameter sweeps, historical simulation, ranking, and statistical review.

FocusVision | Senior Software Engineer

Nov 2015-Jun 2018 | Portland, OR

Integrated five acquired production systems. Consolidated Rails/PostgreSQL SaaS platforms while leading engineers, coordinating deployments and migrations, and delivering customer-facing improvements.

EARLIER 24tru - Software Engineer (2013-2015): co-owned a small SaaS platform and replaced a slow Solr workflow with a custom Java indexer, improving performance by roughly 100x. **gloo - Software Developer (2012):** delivered Rails/PostgreSQL features, tests, and fixes.

TECHNICAL RANGE

CORE Rust, Python, SQL, Ruby, Go, TypeScript, Java | **PLATFORM** Docker, AWS, Linux, CI/CD, Grafana, Prometheus
SYSTEMS REST, WebSockets, GraphQL, MCP/CLI, internal tools | **DATA** PostgreSQL, ClickHouse, SQLite, Pandas, replay, experiments
